

REBELLION 2

Specification and Price List 2023

Introducing RP Motorhomes

The RP brand was founded by Steve Young from the desire to produce a luxury, space saving sports vehicle for family recreational sports. Steve found nothing on the market that met his requirements so embarked on building his own and this is where the RP brand was born.

With family values and happy customers at the centre of their core beliefs, they have been providing the motorhome market with a range of exceptional leisure vehicles since 2014.

Innovation, creativity and attention to detail

Underpinning everything we do at RP Motorhomes is the use of innovative design and technology and craftsmanship that excels in creativity and attention to detail. Our van conversions don't just look stunning from the outside and inside but impress at every level of scrutiny. We take pride in every stage of the conversion process as we create luxury motorhomes for the most discerning customers.

So what's new?

Never content to rest on previous success, we're delighted to bring you our new Rebellion motorhome. This has been designed specifically for the off-grid adventurer who wants to be free from the ties of on-site services.

We've re-imagined a design with the go-anywhere owner in mind and our elevated rear lounge with a double up and over door continues to be a favourite, with the considerable rear garage space and the airy cosy retreat.

The new for 2023, torque-on-demand All Wheel Drive system, reassuring and reliable Victron off-grid electrical systems and the highest specification build we've ever produced, means you need to be prepared to be amazed, charmed and impressed in equal measure.

But there's more! New for 2023, we have an all-electric upgrade that removes the need for LPG altogether through an enhanced new future-proof electrical system. Also for 2023, an entirely more earthy solution for your sanitation is possible with a composting toilet upgrade.

And the winner is ... RP Motorhomes

For the third year running we've received the highest recognition from the Caravan and Motorhome Club's Design Awards. For 2022 we were voted the WINNER in the category 'Van Conversions with a fixed roof under 6m'. This was for our AWD Exclusive Rebel Twin which is our top specification 4x4 model.

For 2021 we were awarded the only 5 Star rating for a Fixed Roof Van Conversion under 6 metres. In 2020 we were voted the WINNER in the category 'Van Conversions over £65,000'.

We are so delighted with this achievement and thrilled to be continually recognised by the Caravan and Motorhome Club. We take great pride in our design and build process, continually striving to provide innovation and exceptional attention to detail. This is only possible because of the fantastic, professional and hard-working team who make RP Motorhomes what it is today.

So please enjoy this brochure for the bigger brother of our award winning Exclusive Twin Rebel AWD.

Innovation and Technology Exclusives

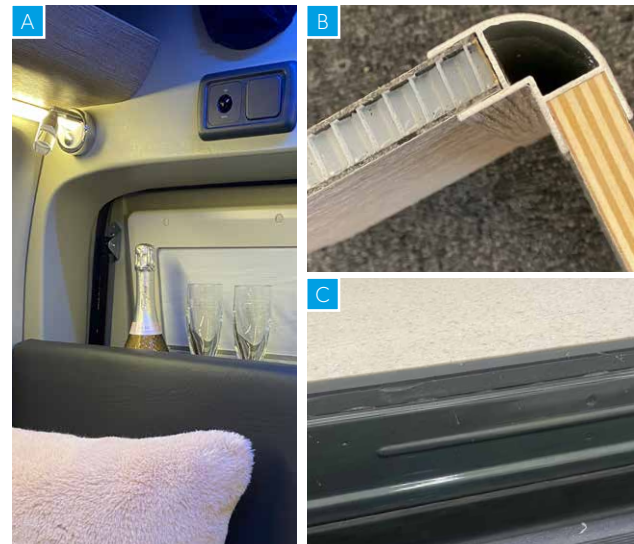

At RP we constantly strive to innovate and improve the way we build and manufacture our motorhomes. We start with the best vehicle available and partner this with a design and specification from the best technology the industry has to offer.

Our focus has always been the end user experience, so our innovation leads directly to improved ergonomics, efficiencies and experience for our customers.

You'll find bespoke lightweight plastic panels (A) and trim that fit the exact shapes and contours of the vehicle and complements the excellent Mercedes-Benz finishing.

Further weight saving comes from the recycled plastic honeycomb sandwich (B) that fills much of our furniture frames.

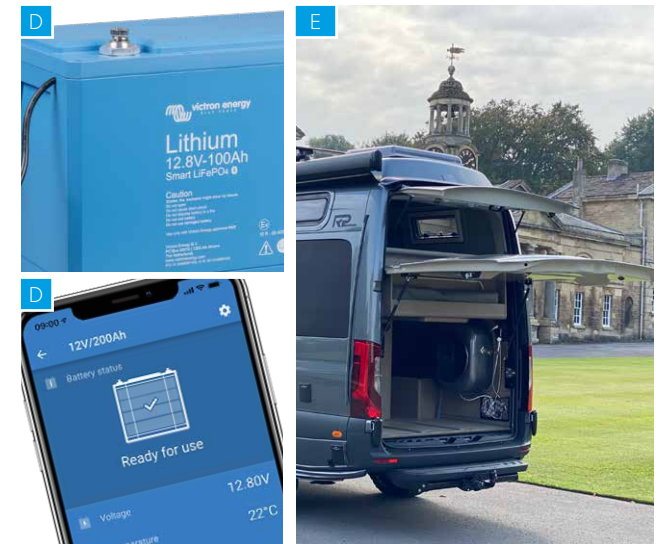

Insulation made from XPS extruded polystyrene (C) is used underfloor in all our motorhomes. It provides the exceptional thermal performance, high compressive strength, and low water absorption for an outstanding floor insulation.

For reliable electrical supply we use solutions from the industry leader (D) Victron Energy. Their Lithium batteries, charging and inverter technology provide the electrical heart of every RP Motorhome. We design our systems to provide clarity and simplicity to the user whilst harnessing all the benefits of this advanced technology.

The day to day living experience in our motorhomes is enhanced through thoughtful design and high quality specification. You'll find beautiful tactile Corian® work-surfaces coupled with soft close drawers and overhead cupboards. All handles are self-latching and flush fit providing secure storage and clean lines at every turn.

The up and over rear garage doors (E) designed exclusively by RP had its origins in an early sport model providing sheltered access to facilitate the loading of sports vehicles. Extending this idea to the leisure models we reduced the garage height to incorporate an elevated lounge which you can now upgrade with its own up and over rear door. You get the added garage space and a unique airy upstairs retreat for living and sleeping.

The RP Motorhomes Aesthetic

The luxury is in the details and the moment you reach out to use a feature on any RP motorhome you'll know you've come home. A perfectly crafted high quality product that has been designed with the end user in mind.

Beautiful and practical Corian® worksurfaces throughout. Soft close drawers and overhead cabinets with automatically retracting latches. Warm LED lighting, charging points, storage at every turn and the highest quality components under the skin. There's no flimsy feeling interaction as you live, work and play in the Rebellion, what you see is beautiful, useful and built to last. RP Motorhomes offer an exceptional vehicle specification for the Rebellion with an enhanced habitation specification aimed at those wanting the freedom of off-grid living.

Building excellence on the class leading Mercedes-Benz Sprinter

A base vehicle without compromise

The Rebellion demands the very best possible foundation upon which to build. Why would you compromise on the driving force behind what is a premium product? We didn't and found what we were looking for in the Mercedes-Benz Sprinter.

With an enhanced cabin environment, the highest standard specification of any large van, the Sprinter is a perfect fit. Including a wide range of sixth sense safety features, every Sprinter is also powered by Mercedes PRO Connect providing enhanced security, efficiency and a three year warranty.

Efficiency and eco credentials

The base vehicle of choice for the Rebellion is the AWD 419 L3H3 with a super-high roof and 7m length. It includes the upgraded 190bhp OM654 engine which boasts lower fuel consumption and emissions with indistinguishable torque and power to the recently retired V6.

We couple the OM654 engine with the smooth new 9G-TRONIC auto gearbox, providing additional fuel economy and lower emissions.

The stringent Euro 6 / Euro VI emissions standard has been met with innovative SCR (Selective Catalytic Reduction) technology that passes the exhaust gas through a catalytic converter, adding water-based AdBlue® to further reduce the Sprinter's emissions.

Exclusive specification excellence

The Rebellion model has its origins in the Explorer range where you will find our usual *Premium* and *Exclusive* vehicle specifications.

The Rebellion however is designed for the off-grid customer who expects a vehicle that can look after itself in the most demanding of circumstances. We've therefore gone beyond the comprehensive safety and comfort upgrades our *Exclusive* vehicle specification offers, and added that little bit extra to provide the ultimate RP owners' experience.

The Rebellion also attracts a significant price discount over adding this level of specification to the Explorer as well as creating a perfect balance of everything you need.

For the 7th consecutive year.

Rebellion vehicle specification

Rebellion Vehicle Specification

The Sprinter has a truly impressive and advanced specification, helping you get where you're going safely, efficiently and in typical Mercedes-Benz comfort and style.

Starting with the top Mercedes Premium specification trim level and adding a few RP essentials creates a competent all-rounder. Add some of the more exclusive Mercedes extras and a few of our own and you have a feature rich, beautiful machine that inspires confidence and pleasure in equal measure.

Engine and Gearbox upgrade

Sprinter 419 190bhp 2.0 Litre 2-stage turbocharged 4-cylinder diesel with 9G-TRONIC Auto

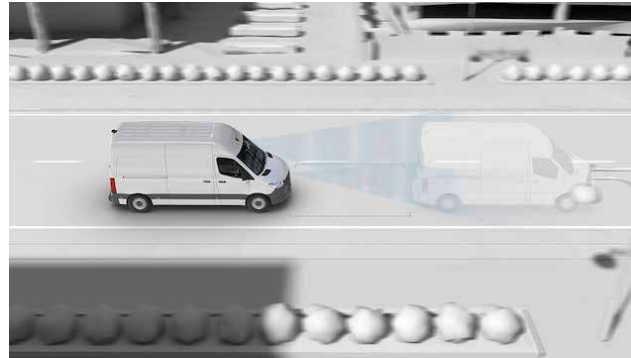

Safety, security and connectivity

- Dual Air-bags
- Electric Parking brake
- Keyless start

- Cruise control
- Attention ASSIST (Prompts driver for breaks when drowsiness detected)
- Crosswind ASSIST (Detects track offset and helps driver maintain the lane)
- Pre-installation wiring for Blind Spot ASSIST

- Active Brake ASSIST (Helps prevent accidents with vehicles or pedestrians ahead)

- Adaptive ESP® (A complete package of electronic interventions to stabilise the vehicle in critical driving conditions)
- Instrument cluster with colour display

- Electrically heated, adjustable and foldable mirrors
- Headlight assistant (Switches dipped beams on and off depending on light conditions)
- Highbeam ASSIST (Switches main beams on and off in line with conditions)
- Fog lamps with cornering light function

- Wet wiper system (Keeps the windscreen clear when using the integrated water jets in the wipers)

- Parking package with 360-degree camera

- MBUX multimedia system with 10.25-inch touch screen, USB-C and Bluetooth® interface, WiFi hotspot, Apple CarPlay/Android Auto and a DAB radio
- Navigation / Live Traffic capability (3yrs map updates)
- Multi-button keys
- Double locks
- VIN visible from outside

Rebellion vehicle specification

Interior

- Height and tilt steering wheel adjustment
- Multifunction leather steering wheel

- Comfort overhead control panel
- Hinged lid storage compartment
- Additional USB-C charging point
- Charging Package, dashboard (Two 5v USB-C sockets and 12v socket)

- Driver and co-driver comfort seat
- Driver and co-driver armrest
- Heated seat for driver and co-driver
- Driver and co-driver lumbar support
- TEMPMATIC semi-automatic climate control system

Exterior

- Semi comfort air suspension to the rear axle
- Heated windscreen
- Radiator grill frame in body colour
- 93L fuel tank
- Direction indicators on front wing
- Electrically operated sliding left-side door
- Front and rear mud flaps
- Trailer-coupling with fixed tow ball and 13-pin socket
- Flat Paint (Customer choice - see below)
- Black Rhino Alloys (Customer choice - see below)
- BF Goodrich All Terrain Tyres LT245/70R17 119/116S

We will do everything we can to ensure we meet our design specification but the worldwide silicon chip shortage and supply chain challenges may not always make this possible.

Rebellion AWD Sprinter specification

Rebellion AWD Specification

The Rebellion is uniquely tailored for the off-grid customer with the sure-footed upgrade of the brand new torque-on demand (AWD) all-wheel drive system.

The new drive system is partially derived from the current Mercedes-Benz Cars modular system. Unlike the engageable predecessor system, which fed 35 percent of the torque to the front and 65 percent to the rear axle in 4x4 mode, this can distribute the drive torques fully variably between the front and rear axle depending on the situation and without any input from the driver (Torque-on-demand).

Torque-on-demand system

Fully variable torque distribution is ensured by an electronically controlled multiplate clutch integrated into the transfer case. If the multiplate clutch is disengaged in normal driving operation, the rear axle drives the vehicle entirely. With the multiplate clutch engaged, the front axle comes into play. This ensures high traction and effortless handling. A further advantage over the previous engageable all-wheel drive: in addition to the higher comfort through the automatic torque distribution the new system works much more quietly.

As soon as the driving situation calls for it, the drive torque is fed to the front axle. If this is no longer needed – for instance in powerful braking manoeuvres with ABS intervention – the front drivetrain is switched off and the torque is reduced to zero. If there is a risk of understeering or oversteering under load, the torque is distributed so that the vehicle is stabilised again.

AWD vehicles benefit from a higher ground clearance and fording depth, and are able to master greater breakover, approach and departure angles.

The added confidence on slippery and steep surfaces will mean you're never stuck for a finding a new adventure or getting yourself out of a tricky situation.

AWD specification requirements

There are a few specification requirements that Mercedes has built into the AWD range to take account of its intended use.

Externally you'll notice the direction indicators have moved from the wing mirrors to the front wing and LED high performance headlamps and tail lights are not an option. The fuel tank is increased by 22 litres and you lose the Eco Start/Stop function.

Confidence Boosting

There's few things more worrying in a large, heavy vehicle like a motorhome than getting it stuck. Loose stone, snowfall, overnight rain turning the site to a mud bath won't trouble you. It's hard to express just how surreal it feels to drive the Rebellion in conditions like this. It grips, it turns, it stops and yet what you see is telling you that you had better call the rescue services. In the Rebellion you are the rescue services.

New Adventures

The Rebellion has been designed to be a supremely comfortable and capable motorhome even when untethered from the services of sites and freed to roam. In a Rebellion you'll find new destinations are possible and new adventures await.

Rebellion innovation and technology

The Mercedes-Benz Sprinter is an award winner for many reasons, not least of which is its manoeuvrability and accessible proportions. You'll get where you want to go with miles of smiles.

Technology that works for you

The latest technology is at the heart of all RP Motorhome builds and you'll find many new and innovative solutions for power, light, heat and sanitation.

The Rebellion takes this one step further by combining many of the overland and off-grid upgrades we offer, and adding some exclusive additions reserved for the Rebellion model such as additional winter protection.

Image Credits: Mark and Sue Steers

Our design brings a sophisticated simplicity that makes the daily practicalities of living and owning a motorhome easy, effortless and worry free.

The Victron Lithium battery powering your motorhome is managed by matched Victron electronic systems that optimise its charging and use as a 230V power source.

Simple on/off controls provide an obvious way to select how you want to use power and the automated systems do the rest. Bluetooth connected smartphone apps, provide a level of information and control to satisfy anyone wanting to understand what's happening behind the scenes.

Keeping cool

Refrigeration is provided from the eye level Thetford 150 litre compressor fridge. Designed with one touch control, efficient electric power and mirrored for your convenience. You also have the option to add a further 33 litre of cooling from a Vitrifrigo freezer.

No more guessing

- Fresh and waste water levels are provided on a dedicated LCD display, giving you a clear percentage readout
- Gas is isolated by a single electronic control switch
- Battery run-time on current use
- Intelligent charging modes optimise battery life

Combi simplicity

The Truma Combi D6E heats your vehicle and water at the same time. Enjoy twice the comfort from the latest heating technology that runs on Diesel or electric when you're connected to a site supply.

New for 2023, the Truma heating or optional cooling systems are controlled via the Truma iNet X panel and smartphone app. The 4.3" colour touchscreen is simplicity itself and provides all the control and information you need at your fingertips.

Leisure needs to be pleasure, so harnessing the latest technology to bring effortless motorhome living is in the DNA of all RP Motorhomes.

Victron technology for electric independence

240 Volt supply with no hook up

Getting connected to a hook-up supply on your chosen site makes everything easier. But what if you could have that mains supply without a hook up? This is what the Rebellion is designed for from the ground up.

Victron to the rescue

Our supplier of choice for the RP motorhomes electrical system is Victron. They are class leaders in this technology and provide the reliability and innovation that are the hallmark of all we strive to create.

At the heart of the system is the Lithium battery. This must reliably charge, store and supply your energy needs and be robust and straightforward to manage. The Rebellion comes as standard with two 160 Amp Leisure batteries that you can upgrade to 200 Amp should you require it.

Victron Lithium battery technology provides exceptional control and diagnostic feedback to leverage maximum performance, reliability and longevity.

The dual 30 Amp DC/DC chargers make use of the alternator and starter battery in the vehicle to balance storage and charge when driving. This will all run effortlessly behind the scenes but can be monitored and adjusted via a Smartphone bluetooth App.

MultiPlus intelligent management

The technology that makes off grid living a reality is an inverter. It converts the 12 Volt leisure battery supply to a familiar domestic 240 Volt mains supply.

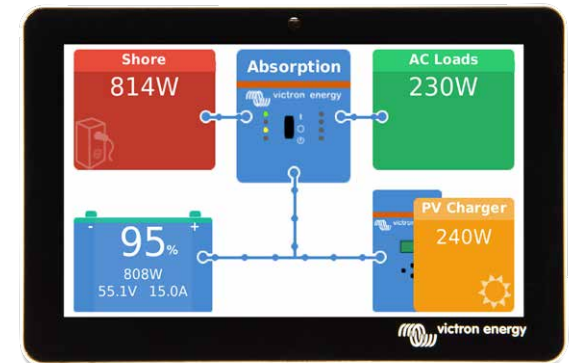

The MultiPlus system is more than just an inverter and would be better described as the brain of the system. It intelligently manages all electrical supply, demand and charging for 12 Volt and 240 Volt.

It will seamlessly switch from supplying 240 Volt from a site hook-up to supplying an indistinguishable supply from the on board Lithium leisure battery. Even sensitive electronic systems continue to run oblivious to the change.

It manages the different charging modes for optimum charging and will use mains supply or, solar power to keep batteries in tip top condition.

Cerbo GX touchscreen

An intuitive control system is essential for the end user and our favourite interface is the Cerbo GX touchscreen. It provides helpful and easily understood information and control for those happy to let the system manage itself. It also allows for detailed and granular control over charging modes and power balancing for those who want it.

Monocrystalline panels

The final piece of the jigsaw for off-grid living are solar panels. These exceptionally lightweight, efficient and thin panels flex enough to fit perfectly to the Sprinter roof. Their unique multilayer construction with a top layer of ETFE plastic keeps them exceptionally clean and effectively self-repairing, due to their high resistance to corrosion and weathering.

You have the option to add additional solar panels to provide a maximum solar charging capacity of 480 Watts.

We always provide a thorough handover and support resources so every new owner leaves confident and competent to make the most of their new Rebellion.

All-electric and sanitation upgrades

Why go gas free?

Gas may have been the traditional cooking fuel for motorhomes but recent advances in solar and battery technology make an all-electric cooking option a strategic choice, not just for now but for future-proofing your investment.

LPG is becoming harder to find and having it on board also limits your destinations, as some ferry companies refuse to carry vehicles with LPG.

The solution is to embrace a system that puts electric independence front and center. With solar, 240V power generation, additional second alternator supplying energy for immediate use or charging battery storage, you'll never be without power.

All-electric cooking specification

Double Induction Hob - Thetford Topline 902

Induction is the heating method of choice for chefs and with good reason. It's efficient, instantly responsive, quicker, cleaner and safer. One session with this induction hob and you'll be wanting one installed in your bricks and mortar home.

Bespoke housing for electric cooker

Electric oven and grill technology is a fast changing market with no one perfect solution but more a matter of personal choice. Air-fryers, toaster ovens, convection cookers, etc. We'll work with your recommendations and we'll create a solution to your preference.

All-electric technology specification

The increased electrical demands require an upgrade in charging, storage and management of your supply.

- Victron Quattro 8000VA inverter
- 2 x 200Amp 24V Victron LiFePO4 batteries
- Cerbo GX70 touchscreen controller (7" screen)
- 3 x 160W Monocrystalline panels
- 240V Power-generator with additional alternator

The Quattro inverter is the bigger brother to the MultiPlus and operates in a similar way, with the essential flexibility of handling the multiple A.C. inputs and outputs.

The Victron lithium-iron-phosphate (LFP) battery is the safest mainstream li-ion battery type and is exceptionally rugged and efficient. Two 25.6V-200Ah capacity batteries provide ample storage capacity that can be monitored via the largest 7" touchscreen Cerbo controller.

Three Monocrystalline panels provide the maximum solar charging capacity that fits on the Rebellion roof of 480W.

Composting Toilet

An environmental friendly solution that no longer involves harsh chemicals and being tied to site disposal points.

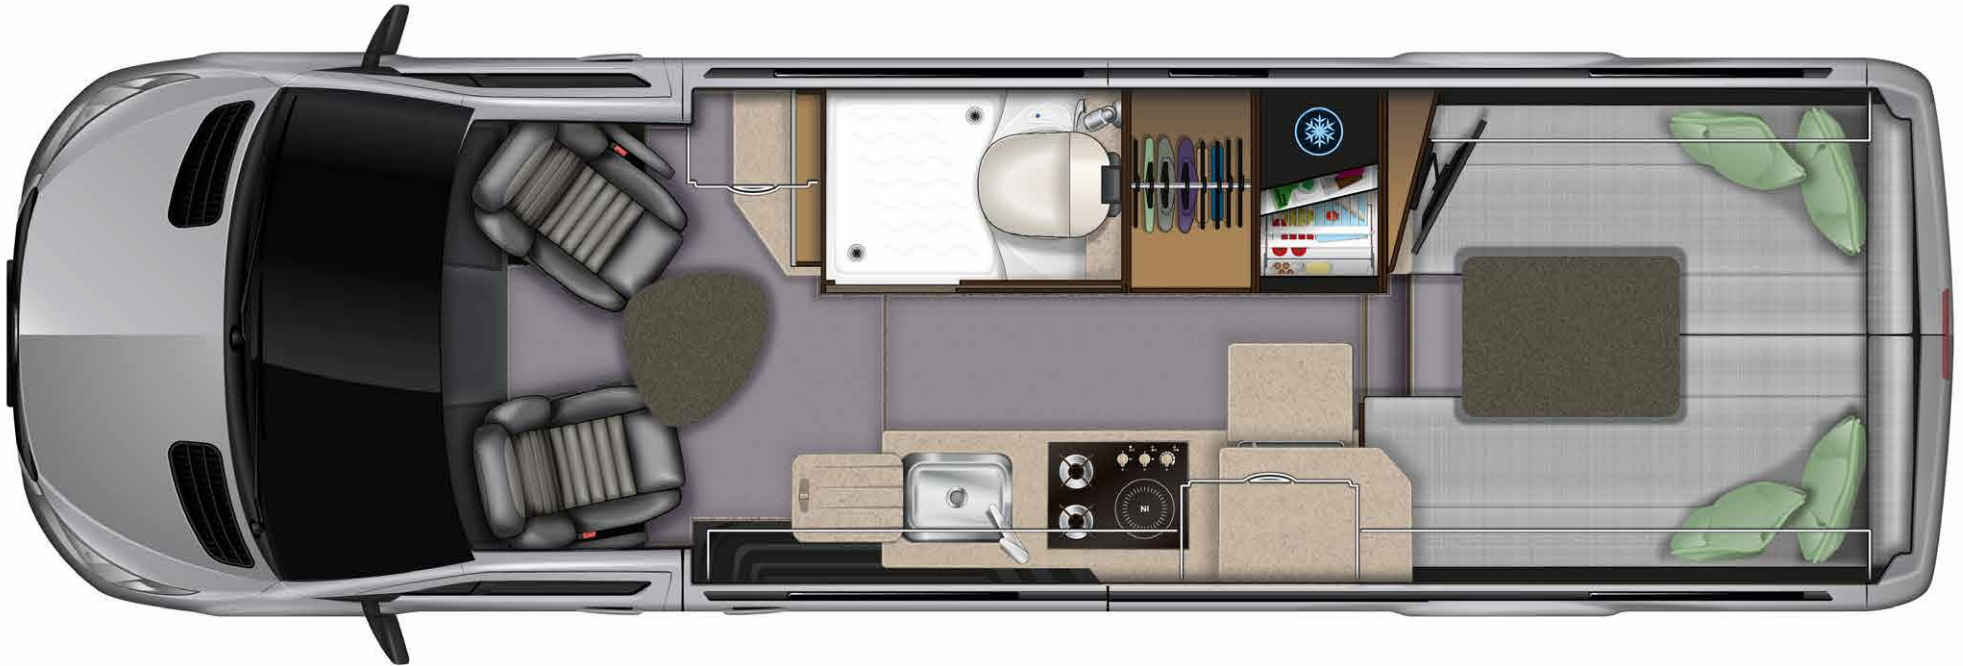

The OGO™ Compost Toilet design offers seamless separate liquid and solid waste management. Waterless and energy efficient, OGO™ provides the most features to ensure an easy transition to going off grid.

- Electric agitator for efficient solid waste composting
- Patented urine separating trap door
- Liquid level sensor
- Easy to empty solids bin
- Fan assisted venting to maintain ideal composting conditions with no odour
- Low 12V power draw for fan and motor
- Easy clean compact modern design

OGO™ allows for 25-30 uses before emptying the solids bin. Polypropylene Calcium Fill exterior, and HDPE (High Density Polyethylene) for the interior with durable pieces and parts, creating a product built to last.

Rebellion 2 conversion layout - daytime

Alternate Front Lounge

Taking advantage of the additional space the Rebellion 2 kitchen layout affords, this alternative front lounge extends the front seating area and creates a new recreation area looking directly out the open side door.

The alternate advantage

The alternate lounge layout has a number of advantages and creates opportunities for using the space in innovative ways.

Increased Payload by 100kg

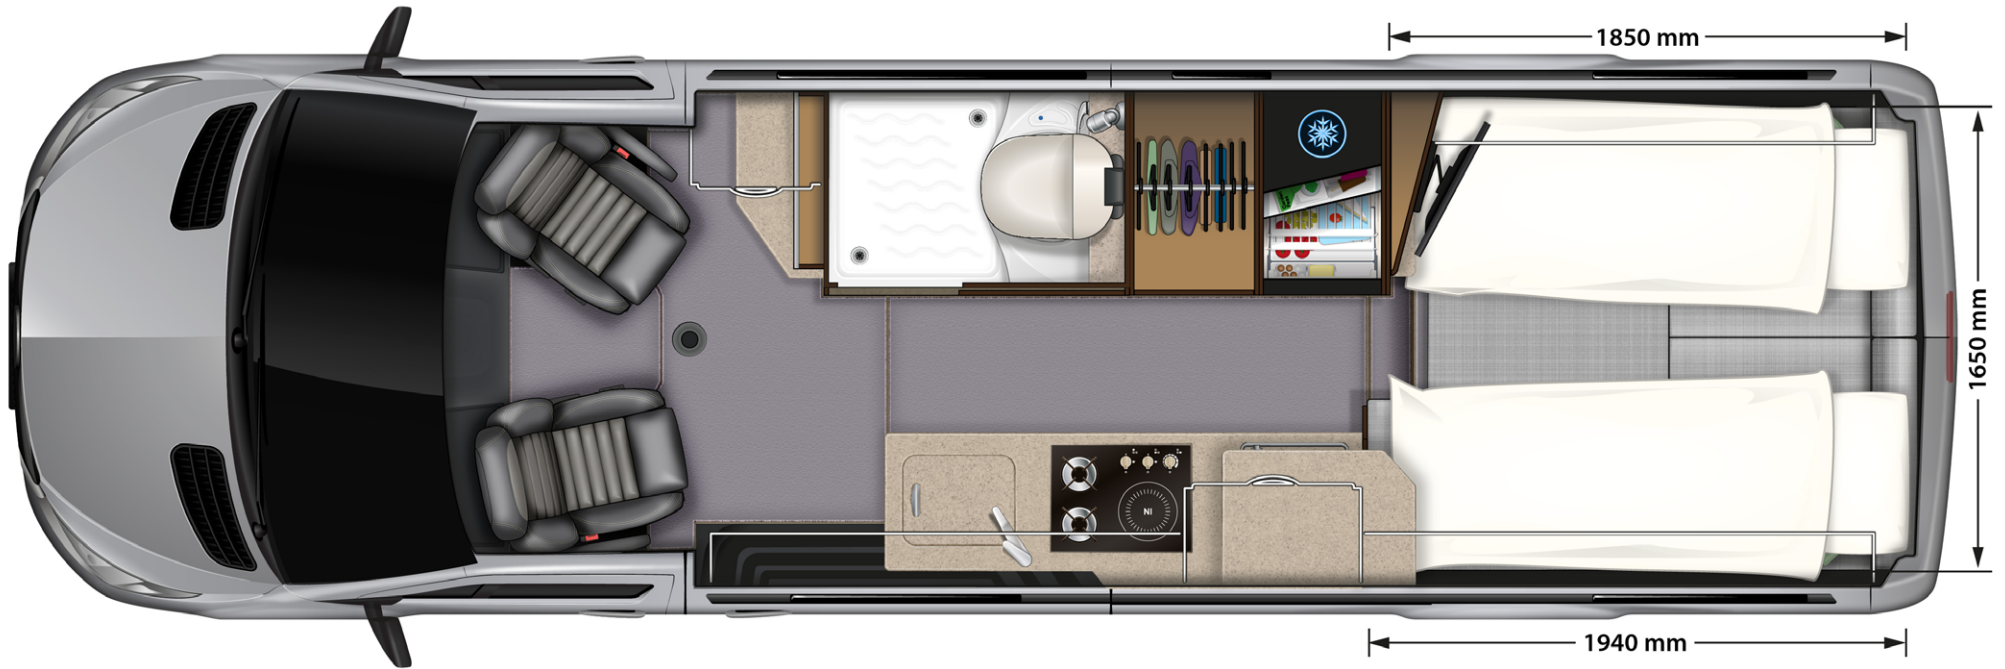

This is significant for some owners who have particular demands for additional load carrying.

Additional space for media technology

This is a new area we have been exploring and part of the drive to design an elite media package. The alternate front lounge can be fitted with upgraded audio and visual technology, powered by the new M series Apple Mac and finished with RP's attention to detail. You'll have a home office/theatre/media centre that travels with you.

This option is only available with the Alternate Lounge on the Explorer 2 or Rebellion 2.

Rebellion 2 conversion layout - sleeping

Rebellion habitation specification

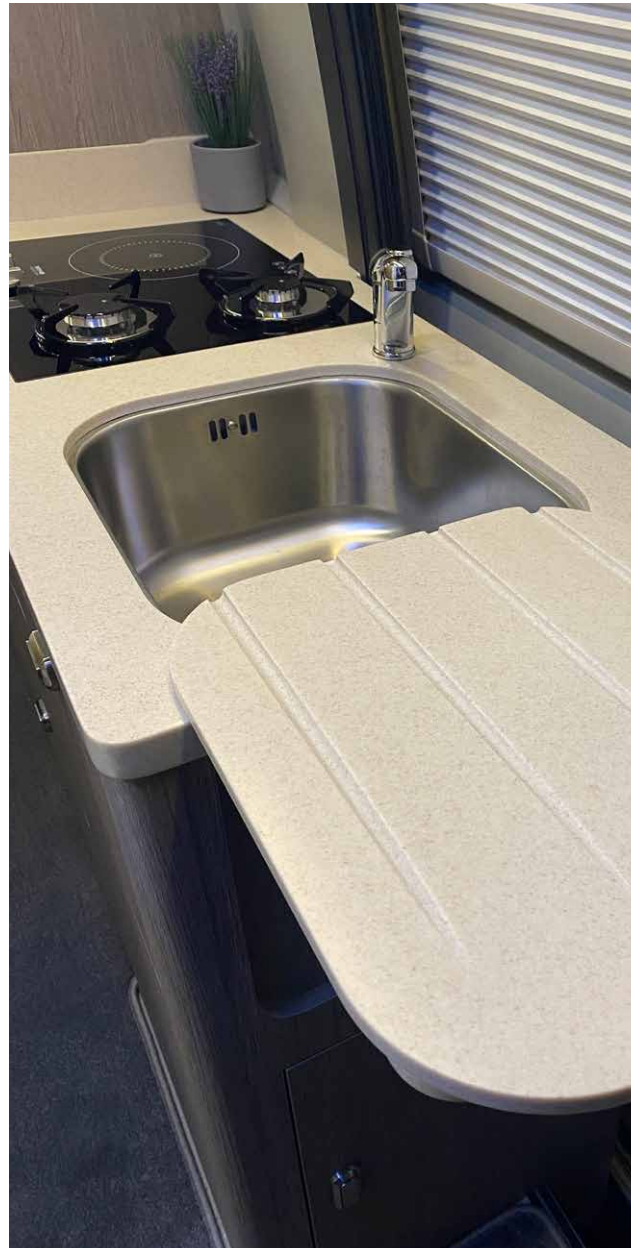

The Rebellion 2 is the perfect solution for a pair of adventurers who want to maximise comfort and amenities coupled with the off-grid advantages and experience that the Rebellion offers.

Kitchen

The luxuriously tactile Corian® work-surfaces provide that initial hint of luxury, but everything on display and behind the scenes has been chosen to provide the best in form and function. The undermounted stainless steel sink with a perfectly cut flush insert makes the most of the space. Clever use of flip-up or pull-out extending work-surfaces provide a surprising amount of useful worktop. Soft close drawers and overhead cupboards with self-latching flush fit handles keep storage options secure and maintain the clean smooth lines of the cabinetry. Easy clean low profile induction hob, work-surface level oven and grill with mirrored high level fridge complete your well appointed kitchen.

- Thetford Topline 981 dual gas/induction hob
- Duplex gas oven & grill
- Thetford 150 litre compressor fridge with freezer
- Undermounted sink with mono mixer chrome tap
- DuPont Corian® worktops (Aurora as standard, bespoke as option)
- Additional pull-out worktop under cooker
- Blum pull out, soft close drawers with self-latching flush handles
- 12V Maxxfan Deluxe roof fan

Front Lounge

The small rotating table that fits between the seats in the front lounge provides just enough space for drinks, snacks or maybe a card game. The workstation area behind the drivers seat has been designed to provide a useful workspace for a laptop with some additional easy access storage for all those little extras that go with our digital connected lives.

- Driver and Co-driver comfort swivel seats with fabric cover (optional part leather or full leather)
- Various tables
- Workstation
- Dimmable reading lights
- Skymaxx roof light
- Combined smoke & Carbon Monoxide alarm
- Thermal grade insulation to floor
- Removable carpets throughout

Rebellion habitation specification

Bathroom

The toilet, shower and sink share a space, providing an elegant and functional bathroom. New for 2023, the sink has had a beautiful redesign for use only when needed, and otherwise folds neatly above the toilet. A waterproof toilet roll holder, high level shelf and the mirrored cabinet providing the all important storage. These changes maximise space to manoeuvre.

When showering, a waterproof blind cover protects the window and the bi-fold shower door means no sticky shower curtain. The suction shower head holder will stick just where you need it and the smooth lines of the GRP shower tray make quick work of any clean up.

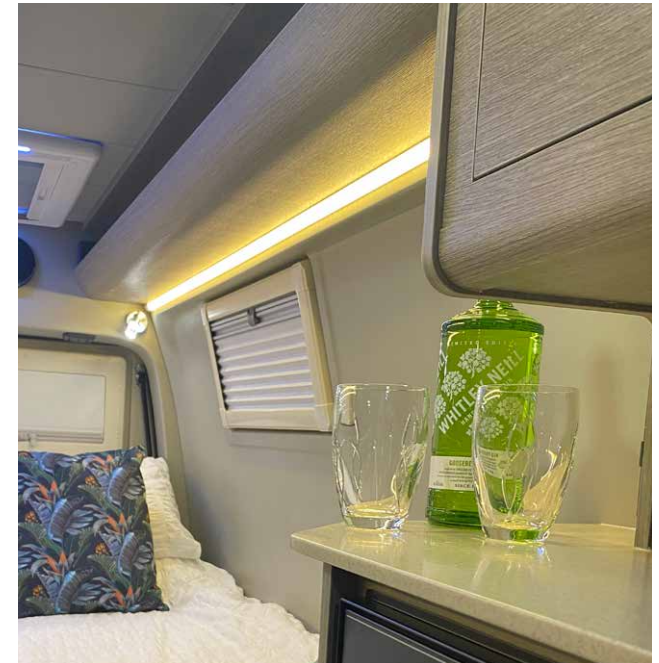

- Bi-fold shower screen
- GRP durable shower tray & chrome mixer shower
- 19 litre cassette toilet with waterproof toilet roll holder
- Corian® space-saving folding sink
- Stainless steel lockable mirrored cabinet
- LED light
- Side window with blind and pull down waterproof cover
- Hanging rail to roof
- Heater outlet

Rear Lounge / Bedroom

Two steps with built in storage take you to the elevated rear lounge. The work-surface on top of the cooker provides a useful connection to the kitchen and extends enough to be a useful side table when you don't want the central table up. Lift up bed frames provide access to the garage that includes hanging rails to the sides. High level windows to the sides and rear with an extra large opening skylight provide the perfect light, airy retreat for relaxation or pleasure. The opening rear window with integral blind and fly screen can be fitted in an optional larger opening panel to maximise that open feeling.

- Multi-configuration U sofa/bed(s) 1940mm, 1850mm bed lengths, 600mm wide as twin, 1685mm wide as double with fabric cover. (Bed lengths with the optional rear elevated lounge opening panel are increased by 50mm.)
- Under bed garage space 860mm high, 890mm depth to central pillar and 1650mm wide. Either side of the pillar the garage extends to a depth of 1860mm and 2040mm.
- Wardrobe, garage hanging space, drawers and high level shelving
- Multi-configuration tables
- Table tripod and leg for outside use of tables
- LED ceiling & dimmable reading lights
- Windows fitted with fly screens & blinds
- Heater outlets
- 12V sockets
- Skymaxx LX roof light
- Avtex L219 DRS-Pro 21-inch TV/DVD/satellite with omnidirectional Maxview Gazelle Pro booster aerial
- Locking Safe

Plumbing & Heating

Additional freshwater storage is a must for the Rebellion with a 40 litre upgrade from the standard Explorer. Coupled with the pure drinking water filter you won't go thirsty. The winterised grey water tank provides essential protection against frost for year round use and the interior monitoring and control systems benefit from the upgraded Truma iNET X touchscreen control panel.

- 200 litres internal freshwater and 100 litres waste tanks
- 12 Volt water pump
- Truma isolation gas valve
- Truma combi D6E diesel heating/water system
- Truma iNET X touchscreen control panel
- 15 litre LPG underslung tank
- Gas level indicator
- Fire extinguisher
- Pure Drinking Water Filter
- Winterised grey water tank

Rebellion habitation specification

Electrical

The electrical systems in the Rebellion benefit from a full off-grid upgrade. Central to this is the Multiplus 3000VA inverter/charger that manages the intelligent charging and distribution of 12V and 240V power. Upgraded control systems in the form of the Cerbo GX touchscreen make accessing information and understanding the system a breeze. A 160W Monocrystalline solar panel provides charging benefits, topping up the batteries.

- LED 12 Volt warm white lights
- 240V RCD mini consumer
- 12 Volt automatic battery charger
- 20m UK mains hook up cable
- 2 x 160 Amp Lithium leisure batteries
- 1 x Cerbo GX touchscreen control system
- Victron Multiplus 3000 VA inverter/charger
- 2 x 30 Amp DC/DC charger
- Electronic water gauges (fresh/grey)
- Electronic internal/external temperature gauges
- Electronic gas isolation switch
- 1 x 160W Monocrystalline Panel

Vehicle Exterior

The Rebellion comes with multiple additions to provide the maximum flexibility for use. Additional power, BBQ and shower sockets make outdoor leisure use simple. The electrically operated awning and side step connect indoors to outdoors with a touch of a button and the side door flyscreen provides the all important bug barrier.

The rear garage storage accessible through the up and over garage door creates a unique leisure vehicle whose application is only really limited by your imagination. Where will your adventure take you?

- Fresh water fill point on both sides
- Electric hook up point
- Gas fill point
- Waste water and drain taps
- External shower point
- External BBQ socket
- External power socket
- Flyscreen to side door
- Thule 4.5 metre electric awning
- Awning strip light
- Thule electric side step
- Up and over rear garage door

Vehicle Security

Fitted as standard on all Rebellions, the award winning and industry recognised SmarTrack immobiliser /tracker.

This S5 device includes features such as a driver recognition system, online account, resulting in approval for the highest possible Thatcham criteria.

Since this is a 24hr monitored system including vehicle tracking, there is a subscription charge with a variety of payment options (monthly, annually, lifetime vehicle ownership).

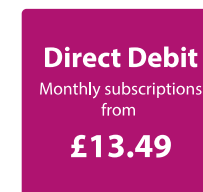

Key Features

Secure Online Account

This device includes a full online account which allows you to view both the current and historical locations and journeys of the vehicle. The online account also includes features such as geofences and access to data reports. The online account is paired with a mobile app, so you can access the vehicle's location at any time.

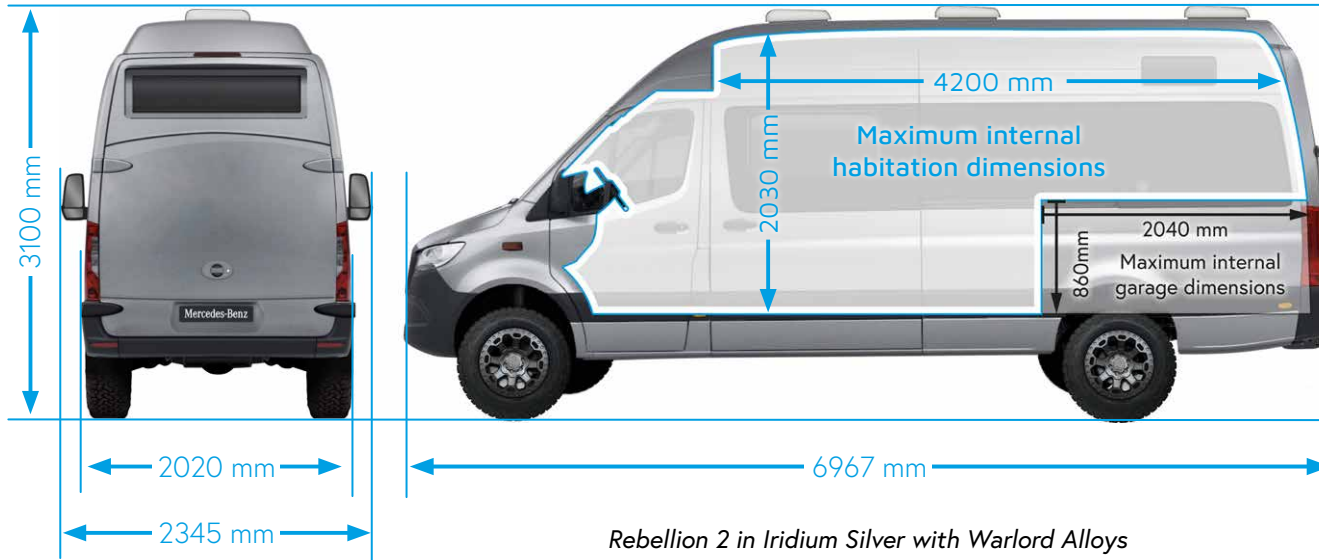

Driver Recognition

A requirement of the S5 Thatcham criteria is that the device must be accompanied by a system which is used to verify the driver of the vehicle is an authorised user. With the Smartrack S5 and S5+ devices, driver recognition can be in the form of either the D-iD mobile app or a physical Driver Detection card.
